

Core no. 12392-1 K.C. N 25° 10.30' W 16° 50.70': 2575 m b.s.l.

Age control:

Date: 28/06/1991

- *C. wuellerstorfi* and *U. peregrina* group ^{18}O records (Shackleton, 1977; Zahn et al., 1987). *U. peregrina* measured by Shackleton (1977) are probably *U. hollicki* according to Lutze (1985).
- ^{14}C ages of total organic carbon (Geyh, 1979).
- ^{14}C ages of carbonate coarse fraction (H. Erlenkeuser, unpublished data.)
- AMS ^{14}C analogue stratigraphy.

Core fit:

- None.

Surface sediment age:

- 2.38 ka, based on average Stage 5.1-5.53 sedimentation rate of 4-5 cm/ka for the Holocene, and a loss of about 10 cm surface sediment typical of kasten cores.

Age/depth correlation:

Orig. depth [cm]	^{14}C age [ky BP]	Error \pm	Calendar years [ka]		Sed.rate [cm/ky]	Original interval/ material/ $\delta^{18}\text{O}$ stratigraphy	Remarks
0	2.21		2.38				+10 cm loss!
3.5	0.71	230	0.48	a)	- . -	0- 7 cm, org. carbon	ignored, mixed layer
31.25	9.1		9.8	b)	4.21	AMS ^{14}C analogue	
40.25	9.43	300	10.46	a)	- . -	38- 42.5 cm carb. <150 μm	ignored
40.25	10.11	330	11.00	c)	4.46	38- 42.5 cm carb. >150 μm	
51.25			11.6	b)	- . -	Top Younger Dryas GISP2	
101.25	14.8		18.3	b)	9.41	AMS ^{14}C analogue	
107.5	15.14	400	18.32	a)	- . -	105- 110 cm, org. carbon	good, but ignored
197.5	19.0	+1170 /-1020	22.17	a)	- . -	195- 200 cm, org. carbon	good, but ignored
226	22.8	530	26.3	a)	- . -	222- 230 cm total carb. >63 μm	good, but ignored
251.25	26		29.5	b)	13.39	AMS ^{14}C analogue	

a) see Winn et al. (1991).

b) corrected after Bard et al. (1990).

c) converted according to CALIB 4 (1998).

Remarks:

- None
